The invention describes a recombinant DNA construct comprising a CC polynucleotide consisting of a sequence encoding an amino acid sequence cavailable in electronic form from the US patent office at Cftp.seqdata.usgto.gov/sequence.html?DocID:2004034888. The polynucleotide CC of the invention are also useful in physical arrays of molecules and as CI plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme cs. conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring CC increased resistance to plant disease, for producing galactomannan, CC lignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake cor by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert polynucleotide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

```
CC cotton, peanut, sorghum, tobacco, sugarbeet, rice or wheat. The capression of genes of the invention was upregulated or downregulated in CC Arabidopsis plants infected with the comycete Peronospora parasitica, CC indicating that they play a role in defence mechanisms. The genes of the invention are regulated by RPP7 or RRP8 which act via unconventional CC signalling cascades, or by the RPP4-dependent pathway. The invention also CC relates to polypeptides encoded by the pathogen infection-related genes; CC promoter motifs from pathogen infection-related genes (ADG88243-ADG88327) (2) expression cassettes, host cells and pathogen-resistant transgenic CC plants and their progeny comprising a polynuclectide of the invention; CC and a method of identifying a plant cell infected with a pathogen. The CC polynucleotide sequences and methods of the invention are useful for CC identifying plants infected with a pathogen, and for conferring CC resistance to pathogens such as comycetes, fungi, bacteria, viruses, comparasitica infection. Note: The sequence data for this patent CC Arabidopsis thaliana gene whose expression is altered in response to CC Peronospora parasitica infection. Note: The sequence data for this patent CC did not form part of the printed specification, but was obtained in CC electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to 691 Arabidopsis thaliana genes (ADG87559-ADG87557)) whose expression is altered in response to pathogen infection, and to homologues of these genes from other plants or fungi, especially from maize, soybean, barley, alfalfa, sunflower, canola (ollseed rape),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Glazebrook J, Wang
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (UYNC-)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC cotton, peanut, sorghum, tobacco, sugarbeet, rice or wheat. The CC expression of genes of the invention was upregulated or downregulated in CC Arabidopsis plants infected with the comycete Peronospora parasitica, CC indicating that they play a role in defence mechanisms. The genes of the CC invention are regulated by RPP7 or RRPB which act via unconventional CC signalling cascades, or by the RPP4-dependent pathway. The invention also CC relates to polypoptides encoded by the pathogen infection-related genes; CC promoter motifs from pathogen infection-related genes (ADG88243-ADG88327) C1; expression cassettes, host cells and pathogen resistant transgenic CC plants and their progeny comprising a polynucleotide of the invention; CC and a method of identifying a plant cell infected with a pathogen. The CC identifying plants infected with a pathogen, and for conferring CC resistance to pathogens such as comycetes, fungi, bacteria, viruses, case consumptions thaliana gene whose expression is altered in response to CC Peronospora parasitica infection. Note: The sequence data for this patent CC did not form part of the printed specification, but was obtained in CC electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              747
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    690
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        636
```

The invention relates to a novel substantially purified nucleic acid molecule encoding a phytol kinase. The nucleic acid molecules and polypeptides of the invention may be useful in mediating tocopherol biosynthesis and in producing plants with increased drought resistance. The current sequence is that of the thale cress chlorophyllase 1 DNA of

Chlorophyllase enzyme is involved in chlorophyll degradation in plant cell senescence. Sequences of the invention are used to produce a plant by transforming a plant cell with chlorophyllase and regenerating a plant from the transformed plant cell. They may also be used to transform cells. The plants that are produced can have economical importance as they can allow for the controlled induction or postponement of senescence. The present sequence is soybean chlorophyllase cDNA from sfll.pk0046.f8 clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              An isolated polynucleotide encoding a plant chlorophyllase polypeptide, used to produce transformed plants that have controlled induction or postponement of senescence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 1174 BP;

Sequences of the invention are used to produce a plant by transforming a plant cell with chlorophyllase and regenerating a plant from the transformed plant cell. They may also be used to transform cells. The plants that are produced can have economical importance as they can allow for the controlled induction or postponement of senescence. The present sequence is wheat chlorophyllase cDNA from wlein.pk0058.a4:fis clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1242 BP; 266 A; 382 C; 343 G; 251 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to plant chlorophyllase (EC 3.1.1.14) proteins and polynucleotides encoding such proteins. Chlorophyllase enzyme is involved in chlorophyll degradation in plant cell senescence. Sequences of the invention are used to produce a plant by transforming a plant cell with Chlorophyllase and regenerating a plant from the transformed plant cell. They may also be used to transform cells. The plants that are produced can have economical importance as they can allow for the controlled induction or postponement of senescence. The present sequence is soybean chlorophyllase cDNA from sflln1.pk002.m10:fis clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  An isolated polynucleotide encoding a plant chlorophyllase polypeptide, used to produce transformed plants that have controlled induction or postponement of senescence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 5; Page 53; 69pp; English

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
